NCERT 11.9.2 16Q

EE23BTECH11021 - GANNE GOPI CHANDU*

Question

Between 1 and 31, m numbers have been inserted in such a way that the resulting sequence is an A.P. and the ratio of 7 th and (m - 1) th numbers is 5:9. Find the value of m.

Solution

Symbol	Value	description
$x(0)$	1	First term of A.P
$x(n)$	31	$(n+1)$ th term
$\frac{x(7)}{x(m-1)}$	$\frac{5}{9}$	ratio of 7 th and $(m-1)$ th numbers
n	$m+2$	number of terms

TABLE 0

The last term is

$$x(n) = x(0) + (n)\,d \tag{1}$$
$$\implies 31 = 1 + (m+1)\,d \tag{2}$$
$$\implies 30 = (m+1)\,d \tag{3}$$
$$\implies \frac{30}{m+1} = d \tag{4}$$

Now 7th and $(m-1)$th terms

$$x\,(7) = x(0) + 7d \tag{5}$$
$$x\,(m-1) = x(0) + (m-1)\,d \tag{6}$$

From equations (5) and (6) the augmented matrix is:

$$\begin{pmatrix} 1 & 7 & x(7) \\ 1 & m-1 & x(m-1) \end{pmatrix} \xleftrightarrow{R_2 \leftarrow R_2 - R_1} \begin{pmatrix} 1 & 7 & x(7) \\ 0 & m-8 & x(m-1) - x(7) \end{pmatrix} \tag{7}$$
$$\xleftrightarrow{R_2 \leftarrow \frac{1}{m-8} R_2} \begin{pmatrix} 1 & 7 & x(7) \\ 0 & 1 & \frac{x(m-1)-x(7)}{m-8} \end{pmatrix} \tag{8}$$
$$\xleftrightarrow{R_1 \leftarrow R_1 - 7R_2} \begin{pmatrix} 1 & 0 & x(7) - 7\left(\frac{x(m-1)-x(7)}{m-8}\right) \\ 0 & 1 & \frac{x(m-1)-x(7)}{m-8} \end{pmatrix} \tag{9}$$
$$\implies \begin{pmatrix} x(0) \\ d \end{pmatrix} = \begin{pmatrix} x(7) - 7\left(\frac{x(m-1)-x(7)}{m-8}\right) \\ \frac{x(m-1)-x(7)}{m-8} \end{pmatrix} \tag{10}$$

1) From the table

$$x(0) = x(7) - 7\left(\frac{x(m-1) - x(7)}{m-8}\right) \tag{11}$$

$$\implies 1 = x(7) - 7\left(\frac{x(m-1) - x(7)}{m-8}\right) \tag{12}$$

$$\implies 1 = x(7) - 7\left(\frac{x(7)\left(\frac{9}{5}\right) - x(7)}{m-8}\right) \tag{13}$$

$$\implies 1 = x(7)\left((m-8) - \frac{28}{5}\right) \tag{14}$$

2) from equations (4) and from table

$$d = \frac{x(m-1) - x(7)}{m-8} \tag{15}$$

$$\implies \frac{30}{m+1} = \frac{x(7)\left(\frac{4}{9}\right)}{m-8} \tag{16}$$

$$\implies x(7) = \frac{75(m-8)}{2(m+1)} \tag{17}$$

Substituting (17) in (14)

$$m - 8 = \frac{75(m-8)(5m-68)}{10(m+1)} \tag{18}$$

$$\implies 2(m+1) = 15(5m-68) \tag{19}$$

$$\implies 2m + 2 = 75m - 1020 \tag{20}$$

$$\implies 73m = 1022 \tag{21}$$

$$\implies m = 14 \tag{22}$$

General term of AP is

$$x(n) = (2n+1)\,u(n) \tag{23}$$

$$x(n) = (2n)\,u(n) + u(n) \tag{24}$$

The Z-Transform Equation for x(n) is
The z-Transform of nu(n) $\leftrightarrow \frac{z}{(z-1)^2}$

$$X(z) = 2\left(\frac{z}{(z-1)^2}\right) + U(z) \tag{25}$$

$$= \frac{2z}{(z-1)^2} + \frac{1}{1-z^{-1}} \tag{26}$$

$$X(z) = \frac{z^2 + z}{(z-1)^2} \quad |z| > 1 \tag{27}$$
